DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 8-11 have been rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The original specification fails to disclose a triangular cross-section different from an equilateral triangle. The invention is not enabled for non-equilateral triangle cross-sections. The specification states, as pointed out in applicant's remarks on page 6, "the bar is shown formed of a triangle which is equilateral throughout the bar length 35. However, the cross section 23 can vary throughout its length, providing it remains a triangle." There is no disclosure of the claimed cross-sections being triangular with no more than two sides of equal length or sides of unequal length or the cross-sections defined in claims 10 and 11. Furthermore, the claims require that the cross-section complete a 120 degree rotation through a distance of one complete circumference of the ring. This works if the triangle is an equilateral triangle. It doesn't work for the claimed non-equilateral triangles. The short side would not match up properly after the 120 degree rotation through the distance of one complete circumference of the ring. How would the ring look? It would not look

smooth and symmetrical as disclosed in figure 1. One of ordinary skill would not know how to make the ring with non-symmetrical triangular cross-sections.

Drawings

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the triangular-shaped cross section other than an equilateral triangular, as defined in claims 8-11, i.e., a 3D rendering of the shapes, not just the triangular cross section, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

4. The proposed drawings were received on 11/9/2006. These drawings are acceptable. However, further illustration of the claimed invention is still required (see above comments).

Allowable Subject Matter

5. Claims 1, 2, 5, 7 and 12-16 have been allowed.
